

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (previously presented): A catheter, comprising:

a shaft portion defining a guidewire lumen and an inflation lumen having a longitudinal cut extending radially from an outer surface of the shaft to the guidewire lumen, wherein said inflation lumen is arcuate shaped;

a generally tubular reinforcing member having a first wall thickness, and a cross-section of a partial annulus; and

a curved elongate reinforcing member having a second wall thickness smaller than the first wall thickness, wherein the curved reinforcing member is disposed on the first generally tubular reinforcing member such that the combination of the generally tubular reinforcing member and the curved elongate reinforcing member form the walls of the inflation lumen and an upper surface of the curved reinforcing member forms a portion of the guidewire lumen.

Claims 2-5 (canceled).

Claim 6 (currently amended): A catheter comprising;

a proximal shaft defining a guidewire lumen and an inflation lumen, wherein said inflation lumen is arcuate shaped;

a first reinforcing member having a first wall thickness, a first convex surface, and a first concave surface, ~~forming a~~ wherein the first reinforcing member has a partial annulus cross-section;

a second reinforcing member having a second wall thickness, a second convex surface and a second concave surface, wherein the second reinforcing member is mechanically coupled to span a gap in the partially annular ~~[[the]]~~ first reinforcing member such that the second convex surface is directed toward the first concave surface so that the combination of the first reinforcing member and the second reinforcing member forms a fluidly sealed tube that is disposed within the proximal shaft to define the arcuate-shaped inflation lumen therein; and

a distal shaft wherein said distal shaft has a greater flexibility than said proximal shaft.

Claim 7 (original): The catheter of claim 6, wherein the first reinforcing member is metal.

Claim 8 (original): The catheter of claim 6, wherein the second reinforcing member is metal.

Claim 9 (original): The catheter of claim 6, wherein the first reinforcing member is polymeric.

Claim 10 (original): The catheter of claim 6, wherein the second reinforcing member is polymeric.

Claim 11 (original): The catheter of claim 6, wherein the first reinforcing member and the second reinforcing member are mechanically coupled by one of adhesive bonding, lap joint thermal compression bonding, laser welding and ultrasonic welding.

Claim 12 (original): The catheter of claim 6, wherein the second wall thickness is smaller than the first wall thickness.

Claim 13 (original): The catheter of claim 7, wherein the first reinforcing member is a portion of a hypotube.

Claim 14 (original): The catheter of claim 8, wherein the second reinforcing member is a portion of a hypotube.

Claim 15 (original): The catheter of claim 7, wherein the first reinforcing member is a curved plate.

Claim 16 (original): The catheter of claim 8, wherein the second reinforcing member is a curved plate.

Claim 17 (original): The catheter of claim 9, wherein the first reinforcing member is a thermosetting plastic.

Claim 18 (original): The catheter of claim 10, wherein the second reinforcing member is a thermosetting plastic.
